Test cases for pgfkeysaddition.sty

Christian Feuersänger

May 16, 2009

1 Testing the 'is descendant of – predicate'

1.1 Testing it for a tikz style

2 Testing filtering for errors

2.1 unknown handler in /my group/

2.2 unknown handler in /handlers/

2.3 Check whether error messages come through

3 Checking single key selection

3.1 command keys: select only /test/a

3.2 value keys: select only /test/c

3.3 handler keys: select only /test/d

4 Checking logical combinations

4.1 NOT = /test/b

4.2 AND

4.3 OR

5 Testing filtered key collection

5.1 full keys

/my other group/O1=value for O1,/my other group/O2=value for O2

5.2 partial keys

O1=value for O1,O2=value for O2

6 Testing pgfkeysalsofiltered

7 Testing family handling

7.1 testing .is family init:

7.2 testing .activate family:

7.3 testing .deactivate family:

7.4 Testing filtering by active family

7.4.1 first: only /test/a should run

7.4.2 second: no option should run

7.4.3 once more again with dynamic family list detection pgfqkeysactivatefamiliesandfilteroptions
